

AMI System

The KIGG AMI Advanced Meter Infrastructure (AMI) System is a scalable Smart Metering Solution. Supporting both Windows and Linux operating systems, it has flexible expansion options for both industry and utilities. The system includes multiple layer redundancy and clustering, a high system capacity that also supports multiple communication protocols and network topology. Data acquisition task management and system reporting status, customised data analysis and report generation, email and SMS event notification, flexible data import and export from / to XML, ECEL, PDF formats.

The applications include:

- Automated meter reading and configuration management
- Commercial energy billing, line loss calculation
- Device data collection for power quality analysis
- Electricity vending of prepayment meters
